Dawit Aregawi

SOFTWARE ENGINEERING STUDENT | CURIOUS LEARNER | PROBLEM SOLVER

About Me

I am a Software Engineering student at Addis Ababa Science and Technology University. I enjoy understanding how technology works and learning how to use it to solve real-life problems. My curiosity about computers began with simple questions about everyday devices, and it has grown into a strong interest in programming and software development.

My Learning Journey

I started building my programming foundation with C++ and later expanded my skills by learning Python independently. I prefer to understand concepts from the basics, ask why things work, and practise by building small projects. I am also exploring areas such as web development, databases, and application development.

What I Value

Curiosity I like asking questions and exploring how things work.	**Persistence** I keep practising when a topic is challenging.
Practical learning I learn best by applying ideas in projects.	**Problem solving** I want to build useful solutions to real needs.

Interests Beyond Coding

Outside my studies, I enjoy reading, playing chess, and exercising. These activities help me stay curious, think patiently, and maintain a balanced routine.

> *“My goal is to keep learning, turn ideas into working solutions, and create technology that helps people.”*
